DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Species A (Figs. 6A and 6B), claims 17 and 21 in the reply filed on 12/20/05 are acknowledged. The traversal is on the ground(s) that the amended claims were indicated as allowable. This is not found persuasive because the instant action is a new non-final Office action containing a new interpretation of previously cited prior art.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 25 and 26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 12/20/05.

DETAILED ACTION

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 17 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 3989027 issued to Kahelin in view of U.S. 3990426 issued to Stokes and established rationales for obviousness. Specifically, Kahelin discloses a pneumatic projectile propulsion apparatus for throwing baseballs and tennis balls. Disclosed

Art Unit: 3641

therein is a pressure canister 18, an exit tube 60, 88; a hopper 12; and a blower 30 for supplying air to canister 24. The covered blower is capable of being unplugged and placed within the hopper for storage. Kahelin does not disclose the particulars of the canister, the barrel or the blower. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the device of Kahelin with the particulars necessary to propel a baseball or tennis ball at the claimed speeds, since it has been held to be within the general skill of a worker in the art to select a known material or device on the basis of its suitability for the intended use as a matter of obvious design choice. For example, Stokes recognizes that various velocities can be achieved by varying the particulars of the barrel (col. 4, ll. 60, to col. 5, ll. 5). This reasoning applies equally to the canister since a desired pressure capacity proportional to the dimensions of the can. Moreover, Kahelin (as well as many other cited prior art devices) disclose a standard canister in combination with a standard blower. It would have been a matter of design choice to provide the device of Kahelin with the particulars of the blower since the applicant has not disclosed that the particulars of the blower solves any stated problems or is for any particular purpose and it appears that the invention would perform equally well with a standard blower of standard amperage.
